**AGU FALL MEETING**  
San Francisco | 12–16 December 2016

## Agenda

### Special CZO Events:

#### CZO Geophysical Information for Teachers (GIFT) Workshop:

**The Shale Hills Critical Zone Observatory Virtual Fieldwork Experience: A Gateway to the NGSS's Three Dimensional Science**

**Monday, December 12**, 10:00- 11:30am, Marriott Marquis, Golden Gate A

Lead by: Dr. Tim White, Dr. Don Duggan-Haas, and Sarah Sharkey (CZO National Office)

#### Town Hall

#### **TH060: Critical Zone Observatories: Platforms for Collaborative Science**

**Tuesday, December 13**, 12:30 - 1:30pm, Moscone West - 3022

Critical Zone Observatories (CZOs) are natural laboratories for investigating Earth surface processes. CZO research seeks to understand these coupled processes across all timescales using quantitative models parameterized from observations of meteorological variables, streams, and groundwater, and sampling and analyzing landforms, bedrock, soils, and ecosystems. Teams of cross-disciplinary scientists at nine sites across the United States work to further CZ science using field and theoretical approaches, education and outreach. The U.S. network now includes a national office and funds to develop international collaborations, and currently is working to develop strong ties with other U.S. entities including the LTER network and CUAHSI.

In this town hall the CZO community seeks to engage the greater Earth surface and environmental science community through: 1) a brief update on the recent development of a strategic plan for the U.S. CZO network, and a status report of international CZ science activities; and, 2) a presentation by CZO researcher(s) highlighting important advances that could not have been made without the CZO approach. All scientists interested in problems related to the surface Earth environment are invited.

#### Union Session

#### **U53A: The Critical Zone: Revealing the Structure, Function, and Evolution of Earth's Living Skin**

**Friday, December 16**, 1:40 - 3:40pm, Moscone South - 102

Conveners: Suzanne Anderson (Boulder Creek) and Susan Brantley

Talks given by William Dietrich (UC Berkeley), Steven Holbrook (UWyoming), Jennifer McIntosh (UArizona), Ying Fan (Rutgers), Amilcare Porporato (Duke), David Beerling (USheffield)

Synopsis: The layers of earth materials and organisms at the Earth's surface behave as a distinct entity- the critical zone, and fundamentally differ from rock below and atmosphere above. Although thin on a planetary scale, the critical zone is substantive for the living systems it supports, and significant in modulating the flows of water and sediment to rivers and the sea. Dynamic interfaces at the top of the vegetation canopy, the ground surface, and at the deep transition to unweathered materials, vary spatially, and co-evolve, forming the template on which hydrologic and ecologic processes occur. Presentations in this session will highlight advances in 1) exploration of the architecture of critical zone and the processes that shape its structure, 2) interactions between organisms and the substrates they live on, and 3) analysis of spatial and temporal variations in water, energy, and biotic activity in the critical zone.
